

Activei App

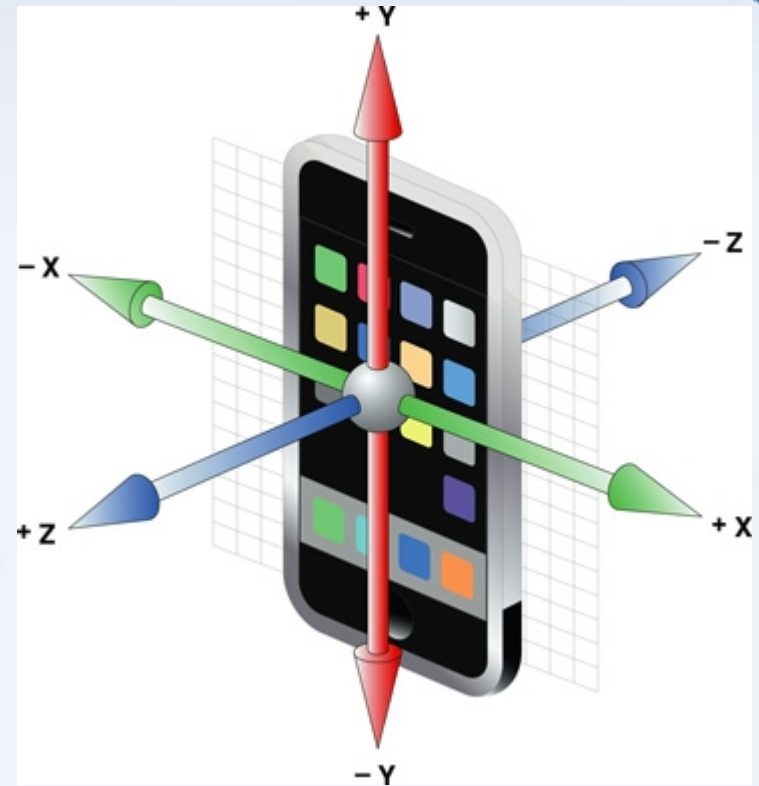

- Collects data from immobility, exercise and sleep
- Directed to both casual users and to researchers

Idea

- Shows your activities after a day and also includes weekly and monthly views
- Includes alarm for recording sleep
- The data is collected to a database as anonyms and can be used for example in school projects

Accelerometer

- 3- Axis accelerometer
- Also measures gravity
- Only sensor used

What we have made

- Accelerometer listener
- Just reads values and saves some
- Calculated total vector from 3 Axis

Whats still on the list

- Making the actual logger with graphic views of your daily activity & data calculations
- Database with online sync and social plugins
- Better user interface, logo and splashscreen

Co-operation

- Different people worked on the project without success at first (no working version)
- Tim only worked 2 weeks at this App
- Never had contact before coming to Belgium

Final Product

- DEMO TIME
